PROJECT

Create Instagram Application

- ❖ I have created an Instagram like application. First, users register themselves by providing necessary information such as a username, name, email, and password.
- ❖ After registration, they can log in using the same username and password. Once logged in, users are directed to the dashboard page where they can update their profile and create posts and to able like another person's post etc.

Personal Blog Post

- ❖ In this project, after registration, two login pages are created: one for users and one for the admin.
- ❖ After logging in, users can upload blogs and have the ability to edit or delete only their own posts.
- ❖ On the other hand, after the admin logs in, they can view all users' blogs and have the authority to delete or edit any post

CERTIFICATE

Web Developer

- ❖ I am certified as a web developer by Edureka.
- ❖ In this certification program, I worked with HTML5, CSS3, JavaScript, and jQuery.
- ❖ Additionally, I utilized Amazon Simple Storage Service (Amazon S3), which is an object storage service known for its industry-leading scalability, data availability, security, and performance.
